# Your flies are down.

## Introducing Solitude® IGR, breakthrough technology that prevents flies.

Your approach to dealing with flies is about to completely change. Solitude IGR (insect growth regulator) is a scientifically advanced feed-through preventive that keeps fly larvae from developing into adults. Studies have shown that it is up to 100% effective against house and stable flies and is safe for your horse. Just top dress your horse's feed with one half ounce daily and in 4 weeks, you'll notice a significant difference. Make Solitude IGR part of your fly control program today, and turn your barn into a no-fly zone. [www.solitudeIGR.com](http://www.solitudeIGR.com)
